Title : On the revolution of Venus around its axis

Periodical : Priroda 44/7, 82 - 83, Jul 1955

Abstract : A discussion is presented of the difficulties in determining the figures relative to the rotation of Venus on its axis, these difficulties being caused by the fact that the planet is constantly surrounded by thick clouds. Experiments are described in which astronomers observed the movements of the clouds themselves by the use of photography, thus establishing certain data relative to the seasons on Venus and the inclination of its axis.
